

Eisha Wahid

Islamabad, Pakistan

eishawahid25@gmail.com | linkedin.com/in/eisha-wahid | github.com/eshawahid

Professional Summary

Fresh BS Artificial Intelligence graduate driven to build intelligent solutions for real-world problems — from facial recognition to phishing detection — using Python, Scikit-learn, TensorFlow, and PyTorch. Experienced across the full data science lifecycle, with a proven track record of taking models from experimentation to production in collaboration with cross-functional teams.

Technical Skills

Programming: Python, JavaScript, TypeScript, C++, SQL

Generative AI & LLMs: OpenAI APIs, RAG, Prompt Engineering, AI Agents, Vector Databases (FAISS)

AI & Machine Learning: Machine Learning, Deep Learning, Computer Vision, NLP, Model Optimization, Predictive Modeling

Frameworks & Libraries: TensorFlow, PyTorch, Scikit-learn, XGBoost, OpenCV, Hugging Face, Pandas, NumPy

Backend & Frontend: Flask, REST APIs, React, Docker

Data & Tools: Power BI, Git & GitHub, AWS, GCP, Streamlit, Google Colab

Education

Air University, Islamabad

2022 – 2026

BS Artificial Intelligence

- Relevant Coursework: Machine Learning, Deep Learning, Computer Vision, NLP, AI Systems, Data Structures & Algorithms, Cloud Computing, Database Systems, Data Analytics

Experience

AI & Automation Intern

2024 (4 Months)

NextGen Guards

Islamabad

- Delivered 2 production AI systems for Siberkoza, collaborating in cross-functional teams to meet client requirements as a technical intern.
- Engineered and tested 5–8 Python-based AI automation workflows, reducing manual operational effort by approximately 40% and improving system efficiency across live enterprise operations.
- Built real-time AI task execution scripts and automated workflow monitoring tools, enabling intelligent decision pipelines with reduced human intervention.
- Optimized data pipelines for reliability and throughput, cutting processing latency and enabling faster ML model inference in real-time production environments.
- Performed end-to-end model testing, debugging, and deployment of AI-powered applications, ensuring performance consistency across production systems.

Facial Recognition Authentication System

2024

Siberkoza

Islamabad (On-site)

- Developed and tested a real-time ArcFace-based deep learning facial recognition system for enterprise identity verification, delivering a production-ready solution.
- Engineered secure backend APIs and access control workflows, integrating the recognition system into live infrastructure with robust authentication logic.
- Optimized model inference speed and accuracy through iterative testing and tuning, meeting reliability standards required for live deployment.

Anti-Phishing URL Detection System

2024

Siberkoza

Islamabad (On-site)

- Built and optimized ML classification models (Scikit-learn, XGBoost) for malicious URL detection, achieving approximately 93–95% accuracy through systematic feature engineering on domain and lexical attributes.
- Designed and deployed the model as a REST API with Flask and developed an interactive frontend testing interface, delivering a complete end-to-end AI-powered cybersecurity application.
- Performed rigorous model evaluation, data analysis, and optimization cycles to maximize detection precision and minimize false positives for real-world phishing threat scenarios.

AI Projects

FitLens — AI-Powered Virtual Fashion Platform | *React, OpenCV, Flask, REST APIs*

FYP – Deployed

- Developed and deployed a full-stack computer vision-based virtual try-on system with body-shape detection and garment alignment, served live via a React frontend.
- Designed a real-time React UI for outfit mix-and-match previews, integrated with low-latency Flask backend APIs powering live model responses.
- Built an AI-driven styling recommendation engine trained on body type, skin tone, and preference data, and applied Generative AI techniques (reverse image search, garment alignment) for a production-grade product.

Mental Health Support Chatbot | *Generative AI, RAG, OpenAI API, FAISS, Prompt Engineering*

Deployed

- Developed a Generative AI conversational chatbot using the OpenAI API and a RAG pipeline with FAISS vector search, achieving context-aware, semantically accurate responses across multi-turn conversations.
 - Applied advanced prompt engineering to reduce hallucinations and improve response relevance for sensitive, high-stakes conversations.
 - Designed adaptive AI agent-style backend conversation logic for personalized, context-retaining dialogue flows.
- Weather Prediction System** | *IoT, Arduino, Machine Learning, Streamlit*

Deployed
- Collected and preprocessed real-time environmental sensor datasets via Arduino, engineered features, and trained ML prediction models — owning the full pipeline from raw data to deployment.
 - Built and deployed an interactive Streamlit dashboard for live analytics and predictions, making model outputs accessible through a user-facing interface.

Entrepreneurship & Innovation

- Co-Founder — Carvo**

Ongoing
- AI Automotive Platform*
- Leading technical development of an AI-powered application for predictive vehicle maintenance and diagnostics, designing backend AI agent workflows and recommendation systems connecting users with verified mechanics.
 - Researching and applying emerging AI technologies for automotive diagnostics, driving continuous product iteration and real-world validation.

Leadership & Collaboration

- Event Manager & Host**

2022 – 2024
- Air University, Islamabad*
- Organized and led national hackathons, AI competitions, and technical seminars, coordinating multidisciplinary teams of developers and stakeholders to deliver high-impact events.
 - Also served as Deputy Director (Documentation) for one of the university’s largest tech events and as a Core Member of the AUDAS Society (2024–Present), supporting event planning and student engagement.

Achievements

BizzTech 2025 — 3rd Position Nationwide
Hult Prize 2025 — Top 50 Nationwide
AI Wrapper Competition (Ignite x NIC) — Top 10 Nationwide
SOFTEC — FAST Lahore — Data Visualization

Certifications

Generative AI Overview for Project Managers — PMI | PMI Essentials: Seven AI Project Patterns — PMI | Talking to AI: Prompt Engineering for Project Managers — PMI
Machine Learning — DataCamp | Graphic Design — DigitalFlare
